THE AMERICAN NUMISMATIC SOCIETY

Founded 1858 *Incorporated 1865*

Broadway between 155th and 156th Streets
New York, NY 10032

PURPOSES: The Society was founded for the collection and preservation of coins, medals, decorations and paper money and for the investigation of their history and other subjects connected therewith.

MEMBERSHIP: Applications for membership are welcomed from all interested in numismatics. Inquiries regarding membership should be addressed to the Secretary of the Society.

DUES: The Annual dues for an Associate Membership are forty dollars. Issues of *American Journal of Numismatics*, formerly *Museum Notes*, the *Annual Report* and the quarterly *Newsletter* are distributed to all members.

PUBLICATIONS: The *American Journal of Numismatics* is a scholarly journal containing articles on numismatic topics. The Numismatic Notes and Monographs consist of separately issued publications, each on a single topic. Numismatic Studies is a series accommodating works in a larger format. *Numismatic Literature*, published twice a year, is an international abstract bibliography of the current literature in the profession. Ancient Coins in North American Collections publishes private collections. The Society is also engaged in the systematic publication of its entire Greek coin collection in *Sylloge Nummorum Graecorum: The American Numismatic Society.*

MUSEUM: The Society maintains a museum located in uptown Manhattan, New York City, which houses its offices, collections, and library. Collections embrace coins of all periods from their inception to modern times, medals and decorations. Selections from its cabinets are on display in an exhibition. The library, consisting of over 70,000 titles, covers all branches of numismatics.

The museum is open to members and the public from 9 AM to 4:30 PM on Tuesdays, Wednesdays, Thursdays, Fridays, and Saturdays. In addition, the public exhibition is open on Sundays from 1 to 4 PM. The museum is closed on Mondays and the following holidays: New Year's Day, Lincoln's Birthday, Independence Day, Election Day, Thanksgiving Day, the fourth Friday in November, the fourth Saturday in November, December 24 and Christmas Day. The public exhibition is open from 10 AM to 4:30 PM on the fourth Friday and the fourth Saturday of November.

PREFACE

Numismatic Literature is a semiannual survey of current publications in or related to numismatics with abstracts of their contents. Beginning with *NL* 79 (December 1967), bibliographic information and abstracts have been submitted by an international board of contributing editors, each of whom collects material published in his country. The contents and quality of *NL* reflect the participation of this editorial board and of individual scholars, whose cooperation can create a truly comprehensive bibliographic tool.

The revisions in format introduced in *NL* 81 have been maintained in order to enable each reader to find and use material in his own field more easily, while benefitting from work published in peripheral fields. Each issue of *NL* is now paged separately, rather than consecutively within each issue, and an abstract can therefore be identified by the number together with the abstract number, for example, 81-1. Most entries are grouped under broad cultural, geographical, or typological sections. In addition, the section Technology and Methodology lists works in which recently developed techniques for numismatic study are described or significatly applied. At the end of each section is a list of numbered cross references to abstracts with related material in other sections. The revisions in format introduced in *NL* 117 distinguish the different fields of ancient study opposed to the broad definition applied in Head's *Historia Numorum*.

Author and subject indices are published at the back of each issue. The author index does not include references to the reviews, which are themselves alphabetically arranged by author. The hoard list is a separate list of abstracts in which reference is made to coin hoards.

Periodical titles are abbreviated whenever possible. A cumulative list of periodical title abbreviations is published in the March issue of even-numbered years. Intervening issues contain a cumulative list of additions. In this way, the list should become a record of the periodical publications in many fields in which numismatic material appears and a convenient compilation of abbreviations for scholars.

Although *NL* is a bibliography of current publications, an effort is being made to include notices of somewhat older publications which are not readily available or are published in languages which readers are not likely to know, and which were not discovered until the institution of the international board of contributing editors.

Comments and suggestions for improvement are welcomed and may be addressed to the International Editor at the American Numismatic Society. The Editor thanks all those who have contributed to *NL* and hopes that participation will continue to grow.

CONTRIBUTING EDITORS

The Contributing Editors listed below provide the international cooperation necessary for the publication of *Numismatic Literature*. Each Contributing Editor has assumed the responsibility for collecting and forwarding to the International Editor at The American Numismatic Society titles and abstracts of all works of serious numismatic interest published in his area. In order that *NL* may offer the most complete, accurate, and current coverage possible, *each author is strongly urged to prepare an abstract of his own work at the time of publication, and to send it to the Contributing Editor of the country in which the work was published.* A guide for the preparation of abstracts follows the list of Contributing Editors.

GUIDE FOR ABSTRACTORS

Entries in *Numismatic Literature* generally consist of two parts, the bibliographic information and the abstract.

Bibliographic Information

All entries must include the following information:
1. The full name(s) of the author(s)
2. The title of the publication in the original language, but in the Roman alphabet. If the publication is not written in English, French, German, Italian or Spanish, the original title should be followed by a translation into one of these languages.

If the publication is an article in a journal, the following information must also be given:
3. Volume and/or issue number
4. Date of the journal
5. Date of publication, if it is different from the date of the journal
6. Page numbers on which the article appears
7. Presence of illustrations.

If the publication is an article in a book of collected works, such as a Festschrift or Proceedings of a Congress, the following information must also be given:
3. Complete title of the collection
4. Place of publication and name of publisher
5. Date of publication
6. Page numbers on which the article appears
7. Presence of illustrations.

If the publication is a book, the following information must also be given:
3. Edition number and editor's name, if any
4. Place of publication and name of the publisher
5. Date of publication
6. Total number of pages
7. Presence of illustrations
8. ISBN, optional.

If the content of the publication is general in nature and does not include specific information or arguments which should be brought to the reader's attention, and the title is fully descriptiive of the contents, the bibliographic information alone may be given and the abstract omitted.

The Abstract

Definition. An abstract is a concise, objective summary or description of the content of a publication. It is different from a review in that an abstract does not offer critical comment or additions to the original work.

Length. Abstracts may be from about 50 to 200 words in length, depending upon the importance or complexity of the publication. A long abstract may be desirable when the original publication is not readily available or is written in a language most readers are not likely to know.

Style and Language. Abstracts should be written in complete sentences. They may be submitted in English, French, German, Italian or Spanish, but will be published in English. All abstracts must include the typewritten, full name of the abstractor.

Non-Current Titles

The International Editor of *Numismatic Literature* maintains a control file, grouped by country of publication, of all new title cards entered into the Society's library card catalogue. Cards are remained from this control file as the relevant titles are received from the Contributing Editors. Title cards in the control file are published as they become three years old in order to prevent omission of these titles. Publication of such entries is necessarily limited to bibliographical information only.

NOTE TO CONTRIBUTING EDITORS

Abstracts intended for publication in the March issue of *Numismatic Literature* should be received at the editorial office of The American Numismatic Society, Broadway at 155th Street, New York, NY 10032, no later than 15 November of the preceding year; abstracts for the September issue should be received no later than 15 May of the same year.

The metal content of the samples of the coins selected from the Han Tomb at Mancheng County were analyzed by the authors, who determined that the copper content of the bronze coins of West Han was not the higher the better, but at an appropriate percentage gradually fixed during the process of minting coins. Opinion concerning Chi Ze coinage is expressed.

A total of 66 analyses by electron probe microanalysis was used for this study. Hiberno-Norse coinage closely follows the standards of the English coinage into the 1020s but thereafter adopts lower weights with periodic attempts to raise weights. Initially (Phase I, ca. 995-1015/20), English silver seems to have been reminted without intermediate processing. In Phase II (ca. 1015/20-1035) changes in lead and zinc contents suggest either a new source of bullion or the introduction of some refining. *(Brita Malmer)*

The coinages of the two neighboring cities of Motya and Lilybaeum (Marsala) are not contemporary and reflect two different historical circumstances. The issues of Motya (5-4 BC) reveal the desire of integration of this city of Punic origin in the Greek monetary system of the Siceliote cities, while that of Lilybaeum, following the Roman conquest, expresses the incisive work of the Romanization of the island between the 3rd and the 1st century BC. *(Andrea Carignani)*

The author publishes 24 coins, 19 of which come from the excavation of Monte Barro. The pieces are subdivided into three groups: the first comprises the sporadic finds dating from Augustus to Constantine II; the second, dating to the mid-5th century, comprises coinage of Honorius, Valentinian III, Carcianus and Maggiorianus; the third, dating to the 6th century, comprises 6 Vandal and Ostrogothic coins. *(Andrea Carignani)*

According to archival material, in 1903 at Popeşti (Vîlcea county) a hoard of 240 Geto-Dacian, Adîncata or Vîrteju-Bucharest type coins was discovered. The author presents all the main data (previously published) concerning this hoard. *(Constantin Preda)*

115 JONES, C. P. Heracles at Smyrna. *AJN* 2nd series, Vol. 2 (1990) pp. 65-76 illus.

On coins of Smyrna in the Roman imperial period, Heracles is represented in two different ways. Often he is shown full-length holding a drinking vessel; in issues from one year under Trajan, this Heracles is crowned by a goddess who is to be identified with Aphrodite Stratonikis. The other image shows only his head, with the cult-title *hoplophylax* ("warden of arms") or *prophylax* ("guardian"). This image reflects a tradition that Heracles haunted the office of the generals (the chief magistrates of Smyrna) and moved huge boulders around it.

137 NEWMAN, ROBERT. A Dialogue of Power in the Coinage of Antony and Octavian. *AJN* 2nd series, Vol. 2 (1990) pp. 37-63 illus.

The author demonstrates that the use of portraits, reverse types, titles and priestly symbols on coins is not insignificant, but reveals what the issuing authority wishes to say about itself. In order to prove this point, the article examines the coins issued by Antony and Octavian between Caesar's death in 45 and Antony's death in 31. This examination provides the evidence that each imperator would respond to the challenges of his opponent's coins and attempt to establish his own right to rule Rome as the true successor of Caesar. In order to free this study from subjective interpretations, the author has provided a chronology for all the coins involved.*(Author)*

In the late Byzantine fortress from Nufăru (Dobruja), the following coins were found in excavations or were sporadic finds: 663 bronze coins and one small hoard of 7 coins from the 10th-11th centuries. The coins are Basil II (82 AE), Roman III (55AE), Michael IV (87 AE), Constantine IX (133 AE), Constantine X (108 AE), Roman IV (48 AE), Michael VII (37 AE), Nicephorus III (43 AE) and Alexius I (72 AE). Most of them had been cut. The author considers the monetary circulation in Dobruja in this period. *(Constantin Preda)*

196 ERAN, A. Reweighing Balog's Glass Commodity Weights. *AJN* 2nd series, Vol. 2 (1990) pp. 129-149.

The reweighing of the weights with the remarks by Dr. Michael Bates on the state of preservation of the artifacts are the basis of the catalogue appended to this article. In columns 6 and 7 of the catalogue the difference between the result of the reweighing and Balog's figure is stated in absolute amounts and in percents. The size of these differences is very small - out of 44 objects reweighed all except three show differences of less than one percent. The data arrived at in the reweighing of the larger glass weights do not affect Balog's conclusions regarding the different ratl/wuqqiyya systems in Islamic Egypt and Syria. *(Author)*

The author has recorded about ten dirham hoards of the 9th and 10th centuries, most of them containing fragments. Fragmentation occurs about the middle of the 9th century when mints in the central parts of the Caliphate stopped striking precious metal at fixed weights. In the later 9th and 10th centuries dirhams hardly ever travelled by long distance trade in the Near East, but rather by multiple transactions over short distances which led to an increase in fragmentation. One should not assume that fragmentation in Eastern Europe and Scandinavia was a result of the local attitude toward money or silver. *(Brita Malmer)*

This is a general survey of the secondary treatment of coins of the Viking Age, mostly in the British Museum. Pecking is shown by excellent photos of a sample of 41 coins from the early 6th century to 1087. The percentages of pecking in the Cuerdale hoard are set out in a table of pecks. In a list of 75 hoards from the British Isles, terminus post quem 625-1074, the main categories of secondary treatment are noted. The currency implications, e.g. coins struck farthest from the Danelaw are less pecked than those found nearer, and the chronological implications, e.g. dating of coin types of the Viking kingdom of York, are especially interesting. Bending, with some pecking, continues through the reign of Cnut and his sons into the period of Edward the Confessor. *(Brita Malmer)*

This paper deals with the mint at Odense in the late 1040s, presenting inscriptions, dies (17 obverse, 22 reverse), and die-chains. The mint at Odense shows a rather special character: a few years of activity, a high number of dies and high quality dies. King Magnus the Good started the coinage with the help of two moneyers from Lund; on his new coins from Odense he was still able to use the title of king, but his enemy, Svend Estridsen, took control of the mint at Odense probably before 1047. *(Brita Malmer)*

Silver. *NNØA* (1985-86, publ. 1991) pp. 11-32 illus. Summary in Danish.

The author investigates the fact that only 109 Carolingian coins are found in Scandinavia. He suggests that many more of them were imported by the Vikings as loot, but melted down and the silver used for non-numismatic objects. Because of the lesser weight of the West European coins they were melted down rather than the Oriental, which were heavier and used commercially by the Vikings. *(Bengt E. Hovén)*

The rediscovery of the antique permeates and determines the artistic production of the Venetian Renaissance. The monetary finds and the formation of the first numismatic collections (Petrarch, Bembo) furnish material to influence all the arts which revive monetary iconography to illustrate manuscripts, to honor famous people, and to celebrate events. In the article the author particularly underlines the debt to the knowledge of ancient coinage owed by Pisanello, Carpaccio, Giorgione, Zuccari, etc. *(Andrea Carignani)*

Gert Hatz surveys, in chronological order, works dealing with the complex problem of the Otto-Adelheid-pfennige, published between 1952 and 1990, summarizing the present state of research (pp. 9-24). Vera Hatz (pp. 25-57) records the Otto-Adelheid-pfennige in Swedish Viking Age hoards up to 1989. They amount to more than 13,600 coins and make up ca. 15 percent of the German coins found in Sweden. The third contribution to the volume by Ulrich Zwicker and Noel and Zofia Gale (pp. 59-146) is a technical analysis of ca. 150 Otto-Adelheid-pfennige and 200 contemporary coins, dealing with the metal composition and the origin of the silver used for the coins, etc. *(Vera Hatz)*

The circulation of coins inside Germany in the Viking Age is shown by maps and literary evidences. A new more neutral terminology is suggested: instead of *Fernhandelsdenar* (10th-11th century) there is 'Middle denar period' and instead of *Regionale Pfennige* (12th-13th century) there is 'Late denar period.' *(Brita Malmer)*

summary.

The late medieval Polish and Lithuanian half-grossi circulated in Poland and Lithuania until ca. 1620 and in Central and Southeastern Europe even longer and in higher quantities. This was due to the price revolutions and monetary crises, which made exporting of small silver coins from Poland lucrative business.*(Marta Męclewska)*

Eight Viking-Age silver hoards have been found at Bandlundeviken on the east coast of the Baltic island of Gotland. The 1984 hoard of Häffinds IV, Burs parish, consisted of 205 Islamic coins (15 Abbasid, 189 Samanid, 1 imitation) with terminus post quem of 934/5. The hoard was divided between four large and three small rolls of dirhams. One of the big rolls was different from the others, according to a normal distribution diagram on the dates of the most common mint, Tashkent. The distribution of die-links between and within the rolls showed the same result.*(Gert Rispling)*

53 hoards and 71 stray finds in Poland from the 13th century are analyzed. They show the increasing inflow and significance of the West-European coins on the Polish market. After a conspicuous break in inflow of foreign coins to Poland in the 12th century, they appear again at the end of the century. They were mostly German emissions in the second half of the 13th century usually from Brandenburg and Mecklenburg. The single finds, of considerable different structure, show that the foreign coins played a role more as "pagament" than as a means of payment, because of the "renovatio monetae" and the obligatory use of current local money in Poland.

At Środa Śląska (Neumarkt), one of the larger towns of Lower Silesia in the Middle Ages, in 1985 and 1988 in the foundations of an old house three pots with silver and gold coins and precious jewelry were found. The find of 1985 consisted of 3,761 Prague grossi and 6 Meissen grossi; in the find of 1988 there were 3,563 Prague grossi, 1 Meissen grossus, 1 heller of Wrocław, then gold florins of Silesia (1), Austria (1), Bohemia (2), Burgundy (1), Dauphine Viennois (1), Florence (9), Hungary (23), Venice (1 zecchino). Among the gold ornaments (not all preserved) were 8 segments of a diadem crowned with eagles and adorned with precious stones, a round buckle with an eagle, two pairs of lunular earrings, a bracelet, two rings, a circlet and a gold strip. The hoard was buried after 1342. The enormous sum of 120 Prague marks in total and the high artistic value of the ornaments suggest that the hoard belonged to a very rich or significant person (see R. Sachs' article). *(Marta Męclewska)*

To the oldest Hungarian coins belong three types of deniers: 1) with legends **SPHANVS REx/PRESLAVVA CIV**; 2) **LANCEA REGIS/Regia CIVITATIS'** 3) **STEPHANVS REX/REGIA CIVITAS**. The first type, known in 3 examples, dated 1000-1015, should be ascribed to the mint in present-day Bratislava—an attribution which is not yet accepted by Hungarian numismatists. The second type can be connected with the coronation of Stephen I in 1000/1001. The most common third type, struck in larger quantities (especially light deniers or obols) was destined for the market. The first and second types were of commemorative character. *(Marta Męclewska)*

The so-called "kipper and wipper-inflation" was also felt in Hungary. From the beginning of the 17th century when the depreciation of small coins began, more and more Polish and German small coins circulated in Hungary. The exchange rate of the "good coins" — first of all the crowns and ducats — rose essentially during that

324 *The American Numismatic Association Centennial Anthology.* Carl W.A. Carlson and Michael Hodder, Eds. (Wolfeboro, New Hampshire: Bowers and Merena Galleries, 1991) 372 pp. illus.

Published on behalf of the American Numismatic Association, in connection with that organization's centennial anniversary, a *Festschrift* of original articles by 26 authors. Subjects range from issues in early American coinage history to American military decorations. Authors include the executive and deputy executive directors of the National Numismatic Collection, and the late historian to the ANA. Individual articles will be separately listed under their respective author's names. *(Michael Hodder)*

325 BORSCHERDT, FRED. "Possible New Variety of 1800 Cent Discovered." *PW* Vol. 25 No. 3 (15 May 1991) p. 125.

Announcing the discovery of a new obverse 1800/79 die, married to a very early state of reverse B of 1800. *(Michael Hodder)*

326 BOWERS, Q. DAVID. *The American Numismatic Association Centennial History.* 2 Vols. (Wolfeboro, New Hampshire, Bowers and Merena Galleries, Inc. 1991) 1744 pp. illus.

The author was commissioned by the American Numismatic Association to write its history. Drawing on the pages of the association's monthly journal, *The Numismatist*, this is essentially a precis of the most interesting and significant events as reflected there. Each calendar year is given its own chapter, the earlier ones being necessarily shorter than the years after 1953, when the author became an active coin dealer. Descriptions of the association's activities after that date are rounded out by the author's own reminiscences. Appendices compiled by Nancy Green, late ANA Librarian, list ANA officers, conventions, membership numbers, and the names of winners of the various ANA prizes and awards. *(Michael Hodder)*

327 BOWERS, Q. DAVID. *Commemorative Coins of the United States. A Complete Encyclopedia.* (Wolfeboro, New Hampshire: Bowers and Merena Galleries, 1991) 768 pp. illus.

An encyclopedic-style listing of all U.S. commemorative silver and gold issues, including the 1848 CAL quarter eagle, which the author argues was the first such. Listings are chronological by particular issue and include copious details such as: development and final choice of artistic theme, biographies of artists and die-engravers, mintages and actual numbers distributed (in some cases controversial), historical notes about the events or personalities commemorated, methods of distribution and scandals involved in marketing several of these issues, market pricing notes (historical prices), and notes on condition grading. *(Michael Hodder)*

Numismatic Association Centennial Anthology. Carl W.A. Carlson and Michael Hodder, Eds. (Wolfeboro, New Hampshire, Bowers and Merena Galleries, 1991) pp. 35-50 illus.

The first, comprehensive attempt at classifying the commercial sources of copper planchet stock purchased by the first United States Mint by the edge markings found on struck coins. Tables provide statistics of annual copper purchases and deliveries of struck half cents and cents, 1792-1802. *(Michael Hodder)*

A steel roller transfer hub in the collection of the Philadelphia Mint dated 1835 shows that the mint experimented with the idea of transferring coinage designs to working dies by using a roller press. The author suggests that the idea originated with Franklin Peale and Christian Gobrecht and dates the hub to late 1836/early 1837. The project was abandoned, however, and no dies were ever made using the cent design that appears on the roller hub. *(Michael Hodder)*

John Work Garrett's notebooks are used to reconstruct the early American, territorial and private gold, and 1792 pattern issues portions of the Colonel Ellsworth collection. An inventory listing provided also indicates the grades of many coins, their purchase prices by Ellsworth and Garrett, and the later disposition of some. *(Michael Hodder)*

Most of the gold coins from the Waldo Newcomer collection were sold privately to Colonel E.H.R. Green. Using excerpts from the October 1916 issue of *The Numismatist* which described Newcomer's exhibition of some of his coins at the ANA convention that year; and B. Max Mehl's advertisement of the sale of the Newcomer collection which appeared in the March 1932 issue of that journal; the author reconstructs portions of the Newcomer collection for his readers. *(Michael Hodder)*

(Wolfeboro, New Hampshire: Bowers and Merena Galleries, 1991) pp. 79-98 illus.

The author shows that Gobrecht's earliest inspiration for the figure of Liberty seated that appears on his coinage dies of 1836-1839 was Thomas Sully. Gobrecht soon divorced himself from Sully's treatment, and drawing on elements of Titian Peale's rendition of Liberty seated, created his own, particular interpretation. Similar discussions of the development of other parts of the final Gobrecht coinage design are offered. A long series of tracings, drawings, and sketches illustrates the author's thesis and provides access to pictures that are otherwise difficult to locate. *(Michael Hodder)*

The author divides coining variants into five categories: planchet errors, die variants and errors, errors arising from the striking process itself, official mint modifications to coins, and modifications occurring after striking. Each category is further subdivided into classes, creating a simple identification system. Descriptions of the processes by which each class of error arises are clear and concise. *(Michael Hodder)*

tion Centennial Anthology. Carl W.A. Carlson and Michael Hodder, Eds. (Wolfeboro, New Hampshire: Bowers and Merena Galleries, 1991) pp. 7-18 illus.

Drawing on Eric P. Newman's earlier work, this study shows that the Continental Currency coinage in all its three metals was originally conceived of as a single coinage. The silver, brass, and pewter coins were struck contemporaneously and without regard to the metal. The pewter coins appear not to have been patterns. Two separate emissions can be detected. The author attributed the first to New York City during the summer 1776, the second to an unknown location very shortly thereafter. The dies for the **E G FECIT** variety may have survived into the 19th century. *(Author)*

Comparative die state analysis and the evidence of metrology show that New Jersey coppers varities struck from reverse U, as well as other varieties married to the obverses appearing with this reverse, were not struck in the years appearing on the dies. Rather, these issues were all backdated, in some cases from as late as 1789. The narrative historical text has been superseded by the author's later work. *(Author)*

347 HODDER, MICHAEL; FORD, JOHN J., JR.; RUBIN, P. SCOTT. The 1861 Paquet Double Eagles. *The American Numismatic Association Centennial Anthology.* Carl W.A. Carlson and Michael Hodder, Eds. (Wolfeboro, New Hampshire: Bowers and Merena Galleries, 1991) pp. 99-126 illus.

The reverse die with Anthony C. Paquet's design for the Philadelphia Mint's coinage of double eagles in 1861 was sunk from the same hub that created the dies sent to San Francisco. Problems with coining from Paquet's reverse were overcome by the San Francisco Mint, but the Philadelphia Mint abandoned Paquet's design before striking any coins from it. The extremely rare 1861 dated Philadelphia Mint double eagles with Paquet's reverse design were struck in 1864 from a reverse die sunk from a different hub. The unique 1860 pattern double eagle in the National Numismatic Collection shows that the Paquet reverse design adopted for the coinage of 1861 was that which appears on the San Francisco strikes, not the Philadelphia's whimsy pieces. This paper had been prepared for and was presented to the 1989 American Numismatic Society's *Coinage of the Americas Conference.* *(Michael Hodder)*

Carlson and Michael Hodder, Eds. (Wolfeboro, New Hampshire: Bowers and Merena Galleries, 1991) pp. 127-130 illus.

The authors suggest that the "Zerbe" proof Morgan dollars of 1921 were actually made by George T. Morgan, engraver to the mint, as a private venture for gain. At least five specimens were sent to Ambrose T. Swasey in 1921; Morgan's note of transmittal, which survives in the Norweb collection, clearly advises discretion in the matter of the origin of the pieces he sent Swasey. A second letter in the Norweb collection, addressed to an unknown recipient, states that Morgan sent two proof examples of the "Peace" dollar design to the addressee, further strengthening the argument that he was "...operating what amounts to a private 'coin dealership' within the confines of the Philadelphia Mint." Some of the authors' conclusions have been challenged. *(Michael Hodder)*

382 FLATT, H.P. The Flawed Peruvian Proof Coins of 1886. *AJN* 2nd series, Vol. 2 (1990) pp. 151-165 illus.

In the collection of the American Numismatic Society there is a rare set of pattern coins of Peru dated 1886. This article outlines the conditions requiring a new set of matrices needed for the production of Peruvian coins of that period. The pattern set shows the errors made in the design of the matrices. Consequently, they could not be used for their intended purpose, for the resulting coins would not have conformed to the existing monetary law. Nonetheless, the desperate financial state of the country ultimately led to their use, thereby changing the design of subsequent Peruvian coins. *(Author)*

449 HUGHES, BRENT. Tales of the Secret Service: Charles F. Ulrich, 'Boss Cutter'. *PM* Vol. 30 No. 3 (May/June, 1991) pp. 90-92 illus.

Charles Ulrich was a master counterfeiter of currency plates for National bank notes. Born in Prussia in 1836, Ulrich emigrated to England in the 1840s, and to America in 1853. Recruited into the British Army, Ulrich took part in the "Charge of the Light Brigrade" in which he was seriously wounded. He returned to America in 1856 and two years later was improperly convicted of forgery and sentenced to 5 years in Sing Sing Prison. Pardoned 3 years later, Ulrich left New York for Cincinnati, where he set up a sophisticated counterfeiting operation. After serving 8 years in Ohio's State Penitentiary at Columbus, Ulrich produced his greatest counterfeits, but in the late 1870s he became an informant for the Secret Service. Ulrich died in 1908. *(Michael Hodder)*

THE AMERICAN NUMISMATIC SOCIETY

Founded 1858 *Incorporated 1865*

Broadway between 155th and 156th Streets
New York, NY 10032

PURPOSES: The Society was founded for the collection and preservation of coins, medals, decorations, and paper money and for the investigation of their history and other subjects connected therewith.

MEMBERSHIP: Applications for membership are welcomed from all interested in numismatics. Inquiries regarding membership should be addressed to the Secretary of the Society.

DUES: The annual dues for an Associate Membership are $40.00. Issues of the *American Journal of Numismatics* (formerly *Museum Notes)*, the *Annual Report,* and the quarterly *Newsletter* are distributed to all members in good standing.

PUBLICATIONS: The *American Journal of Numismatics* is a scholarly journal containing articles on numismatic topics. The Numismatic Notes and Monographs consist of separately issued publications, each on a single topic. Numismatic Studies is a series accommodating works in a larger format. *Numismatic Literature*, published twice a year, is an international abstract bibliography of the current literature in the profession. Ancient Coins in North American Collections publishes private collections. The Society is also engaged in the systematic publication of its entire Greek coin collection in *Sylloge Nummorum Graecorum: The American Numismatic Society.* Following the annual Coinage of the Americas Conference, the papers presented are edited and published.

MUSEUM: The Society maintains a museum located in uptown Manhattan, New York City, which houses its offices, collections, and library. Collections embrace coins of all periods from their inception to modern times, medals and decorations. Selections from its cabinets are on display in an exhibition. The library, consisting of over 90,000 titles, covers all branches of numismatics.

The museum is open to members and the public from 9 A.M. to 4:30 P.M. on Tuesdays, Wednesdays, Thursdays, Fridays, and Saturdays. In addition, the public exhibition is open on Sundays from 1 to 4 P.M. The museum is closed on Mondays and the following holidays: New Year's Day, Lincoln's Birthday, Independence Day, Election Day, Thanksgiving Day, the fourth Friday in November, the fourth Saturday in November, December 24, and Christmas Day. The public exhibition is open from 10 A.M. to 4:30 P.M. on the fourth Friday and the fourth Saturday of November.

PREFACE

Numismatic Literature is a semiannual survey of current publications in or related to numismatics with abstracts of their contents. Beginning with *NL* 79 (December 1967), bibliographic information and abstracts have been submitted by an international board of contributing editors, each of whom collect material published in their countries. The contents and quality of *NL* reflect the participation of this editorial board and of individual scholars, whose cooperation creates a truly comprehensive bibliographic tool.

The revisions in format introduced in *NL* 81 have been maintained in order to enable each reader to find and use material in the appropriate field more easily, while benefitting from work published in peripheral fields. Most entries are grouped under broad cultural, geographical, or typological sections. In addition, the section Technology and Methodology lists works in which recently developed techniques for numismatic study are described or significantly applied. The revisions in format introduced in *NL* 117 distinguish the different fields of ancient study opposed to the broad definition applied in Head's *Historia Numorum*.

Author and subject indices are published at the back of each issue. The author index does not include references to the reviews, which are themselves alphabetically arranged by author. The hoard list is a separate list of abstracts in which reference is made to coin hoards.

Periodical titles are abbreviated whenever possible. A cumulative list of periodical title abbreviations is published in the March issue of even-numbered years. Intervening issues contain a cumulative list of additions. In this way, the list should become a record of the periodical publications in many fields in which numismatic material appears and a convenient compilation of abbreviations for scholars.

Although *NL* is a bibliography of current publications, an effort is being made to include notices of somewhat older publications which are not readily available or are published in languages which readers are not likely to know, and which were not discovered until the institution of the international board of contributing editors.

Comments and suggestions are welcome and may be addressed to the International Editor at the American Numismatic Society. The Editor thanks all those who have contributed to *NL* and hopes that participation will continue to grow.

CONTRIBUTING EDITORS

The Contributing Editors listed below provide the international cooperation necessary for the publication of *Numismatic Literature*. Each Contributing Editor has assumed the responsibility for collecting and forwarding to the International Editor at The American Numismatic Society titles and abstracts of all works of serious numismatic interest published in his area. In order that *NL* may offer the most complete, accurate, and current coverage possible, *each author is strongly urged to prepare an abstract of his own work at the time of publication, and to send it to the Contributing Editor of the country in which the work was published.* A guide for the preparation of abstracts follows the list of Contributing Editors.

GUIDE FOR ABSTRACTORS

Entries in *Numismatic Literature* generally consist of two parts, the bibliographic information and the abstract.

Bibliographic Information

All entries must include the following information:
1. The full name(s) of the author(s)
2. The title of the publication in the original language, but in the Roman alphabet. If the publication is not written in English, French, German, Italian or Spanish, the original title should be followed by a translation into one of these languages.

If the publication is an article in a journal, the following information should also be given:
3. Volume and/or issue number
4. Date of the journal
5. Date of publication, if it is different from the date of the journal
6. Page numbers on which the article appears
7. Presence of illustrations.

If the publication is an article in a book of collected works, such as a Festschrift or Proceedings of a Congress, the following information must also be given:
3. Complete title of the collection
4. Place of publication and name of publisher
5. Date of publication
6. Page numbers on which the article appears
7. Presence of illustrations.

If the publication is a book, the following information should also be given:
3. Edition number and editor's name, if any
4. Place of publication and name of the publisher
5. Date of publication
6. Total number of pages
7. Presence of illustrations
8. ISBN, optional.

If the content of the publication is general in nature and does not include specific information or arguments which should be brought to the reader's attention, and the title is fully descriptiive of the contents, the bibliographic information alone may be given and the abstract omitted.

The Abstract

Definition. An abstract is a concise, objective summary or description of the content of a publication. It is different from a review in that an abstract does not offer critical comment or additions to the original work.

Length. Abstracts may be from about 50 to 200 words in length, depending upon the importance or complexity of the publication. A long abstract may be desirable when the original publication is not readily available or is written in a language most readers are not likely to know.

Style and Language. Abstracts should be written in complete sentences. They may be submitted in English, French, German, Italian or Spanish, but will be published in English. All abstracts must include the typewritten, full name of the abstractor.

Non-Current Titles

The International Editor of *Numismatic Literature* maintains a control file, grouped by country of publication, of all new title cards entered into the Society's library card catalogue. Cards are removed from this control file as the relevant titles are received from the Contributing Editors. Title cards in the control file are published as they become three years old in order to prevent omission of these titles. Publication of such entries is necessarily limited to bibliographical information only.

NOTE TO CONTRIBUTING EDITORS

Abstracts intended for publication in the March issue of *Numismatic Literature* should be received at the editorial office of The American Numismatic Society, Broadway at 155th Street, New York, NY 10032, no later than 15 November of the preceding year; abstracts for the September issue should be received no later than 15 May of the same year.

to archaeology Bradford (September 1989) pp. 28-35.

Determination of trace quantities of Indium, using bombardment by moderated neutrons enables Mexican-European and Potosi silver to be distinguished. Application to Spanish coinage suggests that Potosi silver arrived in Spain by 1570 and in massive quantities during the reign of Philip II. *(Edward M. Besly)*

38 LYON, STEWART. Die estimation: some experiments with simulated samples of a coinage *BNJ* No. 59 (1989) pp. 1-12.

The uncertainties involved in statistical die-estimation are such that it must be used with discretion. The material must be understood and an attempt must be made to gauge in what respects it is a biased representation of the total coinage. The greater the bias, the less is it safe to rely on the results of a mechanistic estimation. It is essential also to remember the variability caused by sampling. The paper develops four estimation formulae, applies them to computer-generated samples of hypothetical coinage and discusses the results. *(Author)*

48 CALLATAY, FRANÇOIS DE. Un tétradrachme de Mithridate surfrappé à Maronée. *NumAntClas* Vol. 20 (1991) pp. 213-226, illus.

An overstrike of a late Hellenistic tetradrachm of Maroneia over a tetradrachm of Mithridates the Great, king of Pontus, suggests a complete revision of the chronology recently proposed by E. Schönert-Geiss for Maroneia. It appears that the bulk of this coinage cannot be dated before the beginning of the eighties BC. The consequences of this overstrike for Mithridates are also examined in terms of circulation. *(Author)*

This study compares the amount of the Persian treasury captured by Alexander the Great and the amount of gold and silver coinages afterward captured with that of the Macedonian king. The first answer comes from using literary sources. The second is less exact and demands calculations and leaves room for doubt. *(Author)*

226 TOLSTOI, IVAN IVANOVICH. *Vizantiiskie Monety* Fasc. X. Barnaul, Scripta Classica, Mediaevalia et Archaeologica Sibirica, 3. (1991)

The ninth fascicule of Tolstoi's *Vizantiiskie Monety - Monnaies byzantines,* one of the standard reference works on Byzantine numismatics, appeared in 1915. Its text ends with the reign of Michael III (842-867), though Plate 72 reproduces 18 coins of Basil I (869-886) that would have been described in the next fascicule. This never appeared for Tolstoi died in 1916. He had, however, completed it, and the text, which had been partially revised by his son but subsequently lost, came to light in March 1991 amongst family papers still in the possession of his granddaughter. It has now been published by V. V. Guruleva, of the Hermitage Coin Cabinet, and runs to the reign of John II (1118-1143). Tolstoi's text (despite its inevitable inadequacies and occasional errors), is scrupulously followed, but Guruleva has added 8 pages of footnotes updating attributions, etc., in the light of subsequent information. The scholarly value of the work resides essentially in the plates and in Guruleva's memoir. A detail interesting to collectors is the recording of the prices, in marks, francs, or shillings, that Tolstoi paid for the coins in his collection, something omitted from the fascicules published in his lifetime. *(Philip Grierson)*

286 ALLEN, MARTIN R. The provision and use of Short Cross class V dies. *BNJ* Vol. 59 (1989) pp. 46-76

Die studies of 3,027 coins of class V of the English Short Cross are analyzed and discussed. Die survival frequencies are tabulated and used to estimate the number of dies supplied. The supply of dies in various fixed ratios is described. Die links found in studies of Canterbury, London, and Winchester coins are tabulated and die diagrams are provided for the other mints of class V. The validity of the existing classification of the coins is considered and L.A. Lawrence's class Va is subdivided. *(Author)*

A. Bammesberger, ed. Heidelberg (1991) pp. 137-189.

This is a survey of the numismatic evidence for the use of west Germanic runes, setting the runic inscribed issues of the 6th to 9th centuries in the context of coinage generally. A particular problem considered is that of the division between the Kentish prototypes and the East Anglian derivatives of "sceattas" in the name of AEpa-Epa. Appendix I provides a listing of runic and mixed runic-Roman coin inscriptions. *(Author)*

A review of the gold coinage of Elizabeth I divides it into three issues: Tentative (1558-72), Restoration (1572-93) and Rationalized (1593-1603) based primarily on major changes of portrait style. Documentary evidence and visual evidence are correlated. All of the major varieties described together with hitherto unpublished pieces are illustrated. *(Authors)*

Deggendorf - Archäologie und Stadtgeschichte 2. (1991) 76 pp., illus.

In the course of excavation in Deggendorf in Bavaria a hoard of 3,829 coins was found, buried in 1633. The coins range from a few gold coins and talers to small change. The local historical and archeological context is explained and the coins are used as a source of the monetary history. Some Bavarian monetary decrees from the time of the burial are included as well as a list of the coins. *(Peter Ilisch)*

Up to the 19th century Schmalkalden (Thuringia) belonged to the electorate of Hesse. As the small territory was influenced by the monetary situation of the adjacent duchies, it was impossible to adhere to the monetary regulations of Lower Hesse. This peculiar situation is traced through local source material and the files of the Ministries in Kassel. In 1848 there was a project of exempting the Schmalkalden area from the Hessian monetary legislation by a special law. *(Author)*

Detailing the output of the Kamnik mint, the author adds two rulers to those given in Metcalf's *Coinage of Southern Germany:* Bertold III Andechs-Meran (1158-1188, three types) and Bertold IV Andechs-Meran (1188-1204, one type). For later rulers, he describes and illustrates the following: Heinrich IV - ten types, Friedrich II - fourteen types, Agnes - three types, Ulrich III - nine types, and Ottocar - one type. In a number of cases, varieties of these types are also described and illustrated. *(Charles B. Smith, Jr.)*

427 POGAČNIK, ALBIN. Srednjeveške kovnice na Slovenskem (2)[Medieval mints in Slovenia (2)]*Numizmatičini vestnik* No.18 (1990) pp.371-372 illus.

The author provides a catalogue of the known medieval output of the mints of Slovenj Gradec (Windischgraz), Ptuj (Pettau), and Celje (Cilli). For Slovenj Gradec, he adds to the rulers given in D.M. Metcalf's *Coinage of Southern Germany* Bertold III of Andechs-Meran (1158-1188 - four types), Bertold IV of Andechs-Meran (1188-1204 - 12 types), Hungarian King Stephen V (1258-1259 - one type), Czech King Ottokar II (1270-1276 - four types) and Konrad Auffenstein (ca. 1334 - one type). For Ptuj, he adds to Metcalf's listing six types of the joint issues of Duke Leopold VI and Archbishop Eberhard II, plus one issue of Hungarian King Stephen V. For Celje, he notes one issue of Count Friederich II (1362-1454) and three issues of Count Ulrich II (1406-1456). Also there is a list of errata, with German translation, for the catalog of the issues of Kamnik (Stein). *(Charles B. Smith, Jr.)*

The author gives a detailed outline of locations in medieval coin-minting activity in Styria, Carinthia, and Carniola and surrounded areas, and links this activity to the ecclesiastical and secular feudal lords who dominated this region, which today constitutes Slovenia. He assumes that some mints produced coins on order for other than their own overlords and further that some overlords were supplied with coins from mints outside the region. Still uncertain is which rulers had the legal right to mint for themselves. The author distinguishes three types of mints: of ecclesiastical feudal lords, secular feudal lords, and rulers such as the king of Hungary and Bohemia and the Hapsburg rulers. *(Charles B. Described is a medal intended to be used as a decoration for Montenegrin veterans of the Balkan Wars. The obverse depiction of Nikola I Petrović is identical to that on the 1910 gold issue (KM13-Y29) with olive branches underneath and the inscription (in Cyrillic) NIKOLA I KRALJ CRNOGORSKI. The reverse portrays a soldier in Montenegrin dress holding a Montenegrin flag and standing on a captured Turkish cannon and flag, with the inscription ZA OSVETU KOSOVA 1389-1912-13. The designer is still unknown, as is the number produced. Only four examples are at present extant of which one, the most recently discovered, has a red and white triangular ribbon attached. *(Charles B. Smith, Jr.)*

Described are coin emissions between 1396, when Branković was given authority over the Trepča mine and Vučitrn by the Turkish Sultan Bayazid II, and 1427, when Brankovič became Despot of Serbia. These coins lack the title DESPOT. The author divides them into two types, earlier issues with no title, and later issues with the title GOSPODIN. Most on the reverse have the image of Christ standing in a mandorla. The gospels are in the left hand and the right hand is giving a blessing. *(Charles B. Smith, Jr.)*

Described and illustrated are ten specimens of the rare coin issues of the Patriarchs of the Serbian Orthodox Church. Issues of the patriarchs were first published in 1934, in an article by Jožo Petrović in *Starinar* on a 1928 find from the village of Malo Bonjica near Vlasotinac. The present author associates them with the breakdown of central power in the Serbian Empire after the Battle of Marica in September 1371 and the death of Emperor Uroš in December of that year. The examples presented here for the most part have the word PATRIJARH in Cyrillic in two lines on the obverse, and on the reverse a seated Christ with gospels in the left hand and the other raised in blessing. One interesting example, instead of Christ's image on the reverse, has a helmet with ox horns and the worn inscription CONTE. This piece is possibly a hybrid, using a reverse die of an issue of the Lazarevič dynasty, which tends to confirm the dating of these coins. *(Charles B. Smith, Jr.)*

The first fully illustrated date guide to the series. Notes on many of the Valentine varieties of each date are provided, with references to the W. W. Neil and Walter Breen revisions of Valentine's work, together with mintage figures for business and proof strikes. Estimates of absolute rarity and rarity in grade are included. Certified population statistics and a historical pricing guide are appended to each date analysis. Major varieties are illustrated, many enlarged. *(Michael Hodder)*

The new variety designated V-5 is reported. The obverse is a severely lapped die, with a "Short Pole," while the reverse bears a retained die cud at the 5:30 position. *(Michael Hodder)*

485 BRIGGS, LARRY. The Comprehensive Encylopedia of United States Liberty Seated Quarters. Lima, Ohio, *Author* (1992) 255 pp., illus.

The first complete analysis of the Liberty Seated type quarter dollar, struck from 1838-1891. Each date and mint combination is plated and discussed, with notes regarding absolute rarity, rarity in grade, die and hub varieties recorded, commonly encountered die states, and other technical parameters. Introductory chapters include a history of the design type and modifications made to it, and notes on edge reeding types and counts used at the various mints striking this type. All illustrations are in black and white; enlargements are provided for overdates, mintmark varieties, and hub die characteristics. *(Michael Hodder)*

A revision of Browning's classic 1925 study of the series, incorporating Walter Breen's notes, observations on rarity, and condition census data; together with Robert W. Miller, Sr.'s numerical condition census information. Descriptions of all varieties discovered after 1925 are included, all but one of which are also illustrated. Browning's original glass photographic negatives were contributed by George F. Kolbe and were used to make new illustrative prints. Textual illustrations are twice life size; the original format plates found in the 1925 edition are also bound at the back. *(Michael Hodder)*

The shattered reverse 1842-0 reported by John McCloskey in issue 52 of the journal has been identified on two different 1842 die combinations. One appears to be 1842-0 A-1, the other is unidentified as yet. The author also reports two 1842-0 reverses married to an 1841-0 obverse, one of which appears to have been struck before the 1841-0 combination. *(Michael Hodder)*

The author reports two new late date cent discoveries. What had been classified as the early state of 1851 Newcomb-9 is actually a different obverse die and should be reclassified as "Newcomb-43." This newly noticed die is known in both an early (unlapped) and a late state. The second is 1851 "Newcomb-44," discovered unattributed by Don Weathers. It is presently unique. *(Michael Hodder)*

Between July 1719 and January 1721 John Law's control of French royal finances also included the grant of the coinage right. Drawing on published royal decrees, contemporary documentary and medallist evidence, and Law's own treatises and letters, this study shows how Law's intentions for French coinage changed in response to ever increasing demands for conversion of his notes to specie. The paper concludes with a listing of the 16 French coin types struck during Law's administrative control of the mints. These types may be considered as part of his Mississippi Scheme in its broadest sense. *(Author)*

A study of Ephraim Brasher's 1786 Lima style doubloon shows that it is a genuine product of Brasher's workshop. Metallic analysis indicates that its alloy is identical to that of several New York style doubloons, as well as the unique half doubloon. The alloy is quite unlike that of contemporary Spanish eight escudos pieces and 19th century U.S. and European gold coins. The EB counterstamp punch applied to the two surviving Lima style doubloons is identical to that seen on the New York style coins. Based upon the progessive development of rust in the punch, it appears that the Lima style doubloons were made first, followed by the New York style doubloons, and finally the half doubloon. The author concludes that Brasher made the Lima style pieces first, in imitation of a coinage familiar in New York banking channels, and later created his own particular New York style design. *(Author)*

The catalogue illustrates most of the die varieties known to Noe, plus a few since discovered, as represented in the collections of Andrew Hain, Alan Weinberg, Joseph Lasser, Anthony Terranova, Norman Stack, and Eric Newman, as well as the ANS. The weights, die axes, and provenances of the coins are also given. *(Author)*

The article discusses the "New Yorke in America" token, and argues that its weight, die axis, punches, and style are consistent with English tradesmen's tokens of the seventeenth century. The eagle upon a ragulated fesse which is the reverse of the piece is the same as the arms of the Lovelace family; and the author contends that this piece was issued during the governorship of Francis Lovelace, 1668-73.*(Author)*

Pennsylvania's political and social history are succinctly illustrated in its Colonial and early Federal paper money. The pattern of Quaker landowners passing the mantle of influence to men of commerce, craftsmen, builders and academically trained professionals followed by the emergence of the radical Patriot shopkeepers and mechanics into positions of primary influence, is fully visible in the Keystone state's paper currency. *(Author)*

512 McCLOSKEY, JOHN W. The Broken Stripe Reverse in the Seated Quarter Series. *GobrechtJ* Vol. 18, No. 53 (Mar. 1992) pp. 39-41, illus.

Several reverse dies used on quarters of the 1840s and 1850s show a circular broken area at the left of the shield. Since this appears with some regularity across different dies the author suggests that it may have been an artifact of the die hubbing process, as yet not fully understood. *(Michael Hodder)*

Reprinted from the *Proceedings of the American Antiquarian Society* (v. 101, pt. 1, Oct. 1991), this is a handbook of conversion tables and commodity price indices for translating colonial American and early English amounts into current American dollar equivalents. The author notes that the indices are dependant upon limited data and represent mean figures, and so the equivalencies need historical qualification to be really meaningful. Additional tables include depreciation factors of Continental currency and a list of periods of American economic expansion and contraction 1701-1838. A full apparatus criticus is provided. *(Michael Hodder)*

This presentation is an excursion into the curiosities, problems and artistic charm resulting from the preparation of American Colonial money. It points out the variations between printing from engraved plates and printing from set type and ornaments. The printers' efforts to make paper money more easily recognizable, to make it impressive and attractive, and to discourage counterfeiting and alteration are featured. Such errors as upside down and reversed cuts, mirror image printing and misspellings (both inadvertent and deliberate) are outlined. Denominational insignia are described and explained along with secret marks. *(Author)*

539 WHITE, WEIMAR W. An Analysis of Carson City Mint State Populations as a Function of Mintage. *GobrechtJ* Vol. 18, No. 53 (Mar. 1992) pp. 23-24.

The author proposes that the rate of survival of mint state Carson City coins is inversely proportional to the numbers originally struck. This appears to be directly contra the accepted wisdom, that the more coins struck the more likely a larger number will survive in uncirculated condition than will from the lower mintage issues. This observation requires further analysis. *(Michael Hodder)*

In a survey of medals given to Native American chiefs in the colonial period, the author contrasts the French medals, from a royal mint and distributed as part of a governmental program, with English medals, whose manufacture and distribution appear in most cases to have been unofficial. These two traditions are seen as having influenced the development of republican American Indian Peace Medals, whose history is traced through the presidency of Jefferson. *(Author)*

660 FRASER, IAN. Broken Serial Numbers on Scottish Notes (Parts 1 and 2). *IBNS* vol. 30, no. 4 (Jan. 1992) pp. 26-29, illus.

Early Scottish notes were produced in books from which they were cut as issued. Serial numbers were hyphenated, showing both the book number and the number of the notes within the book. Later Scottish notes continued to use this and related styles of numbering, leading to erroneous conclusions about the total note issue of many banks. The author presents observations and interpretations for issues of several banks. *(Joseph E. Boling)*
